

Academically-Ambitious and Accessible to All

Queen Mary's Grammar School believes that the Quality of Education experienced by students is driven by a curriculum in its broadest sense: the entirety of a student's learning experience, in lessons and beyond. We aim to design and embed a curriculum that is planned and sequenced to develop in our highly academic students the knowledge and skills necessary for their future roles in society, while ensuring that the balanced curriculum offer is accessible to all

Subject	Year 7	Year 8	Year 9
Art	September – February	September – February	September – February
	Pop Art	Landscapes	Natural Forms
	Through investigating Pop Art pupils are introduced to basic drawing skills, Knowledge of colour theory and the history of Pop Art as well as some of the artists from the movement. Observational, creative thinking, research and evaluation skills are covered in this unit to help develop the foundations of the curriculum.	Art History is the back bone for this unit by looking at and theory behind landscape Art and looking into a number of landscape artist. Pupils have the opportunity to experiment with techniques introduced to them throughout the project. Using several different mediums to develop a range of techniques to assist pupils with an individual clay landscape to conclude the	By looking at a range of natural forms, pupils build on their observational skills in a range of Art mediums in more detail. Pupils will develop further knowledge of artists work and be able to show their clear understanding of this through their own mixed media Art piece at the end of the project. February – July
	February - July Insects	topic.	Cultural art
	By using the theme of 'Insects', pupils develop their knowledge of proportions and symmetry before reflecting on their roles within art. They will look into new art techniques of Wire Sculpture to create art by using inspiration from current artists. Pupils will develop a further understanding of how an idea develops through a project to an end outcome, and how this can be linked to a theme.	Pupils will be developing their skills of analysing art further in this unit through the study of portraits through Art History. Facial proportions, observational skills and different Art medium experiments will assist pupils in developing their own portrait. Pupils demonstrate inspiration from the techniques explored and artists studied throughout the unit.	Through the study of Art from around the world and different cultures and beliefs, pupils explore their creative ideas through the research and exploration of a series of different cultural Art forms. New techniques and Art mediums are introduced while reflecting and building on the key Art elements introduced from year 7 onwards. Pupils develop their knowledge of Art from around the world and the work of associated artists, designers and crafts people to produce a personal final outcome to conclude the project.
Biology	See below for Year 7 Science	Term 1: Exchange - Gas Exchange Systems & Digestion. Reactions: Photosynthesis and Respiration.	Term 1: Cell Biology. Eukaryotes & Prokaryotes. Animal and plant cells. Specialisation. Differentiation.

r			
		Term 2. Genes, Variation, Inheritance. Evolution. Term 3. Ecosystems, Interdependence. Measuring our World.	Term 2: Microscopy. Division and the cell cycle. Stem cells. Transport in cells. Osmosis. Active transport.
			Term 3: Organisation. Digestive system. Heart and blood vessels. CHD. Health issues.
Chemistry	See below for Year 7 Science	Pupils are taught a range of topics covering a number of key concepts: 1) Substances and mixtures 2) Simple chemical reactions 3) Solubility 4) Earth and atmosphere	Pupils are taught a range of topics covering the a number of key concepts: 1) Periodic table 2) Chemical reactions 3) Metals 4) Rates
		 5) Limestone 6) Formulae and equations 7) CREST Bronze award A key feature is the development of not only theoretical understanding but also practical skills. 	A key feature is the development of not only theoretical understanding but also practical skills.
Computing	Our pupils will have gained knowledge of the	Students are working towards an 'Entry Level	Our pupils will have gained knowledge of the
	following by the end of Year 7:	Computer Science' qualification. The course consists of four internally assessed (externally	following by the end of the course (Year 9):
	 Introduction to our computer network and Microsoft Office 365 (Including teams) e-Safety Spreadsheets Computational Thinking 	moderated) examinations and a Programming Project (coding in Python). Further details can be found at: Entry Level - Computer Science - R354 (from 2016) - OCR. The two topic areas are broken into:	This year, students are working towards the completion of their iGCSE ICT qualification. Students started this course at the beginning of Year 8 and will be undertaking the examinations at the end of this academic year.
	5. Databases 6. Programming using Kodu	Computer Systems Computational Thinking	Students must undertake two practical examinations and one theoretical.
	Our pupils will have the skills to do the following by the end of Year 7:	Our pupils will have the skills to do the following	Practical Topics:
	By the end of Year 7 students will be confident users of all the basic features of spreadsheet and database software. In addition, they will have	by the end of Year 8: This course provides students with opportunities	Word Processing (learnt) Presentations (learnt) Databases (learnt)
	developed skills in computational thinking while learning to code in Kodu.	to become familiar with how computer technology works and a look at what goes on 'behind the scenes'. Through the introduction of	Spreadsheet (to be learnt) Web Authoring (to be learnt)

computational thinking, algorithms and programming, this course will help students develop their problem-solving skills.

Finally, we spend a lot of time building the study skills, resilience and confidence needed in students to help them successfully complete our course formal examinations and we hope take this forward to help them succeed in Year 10 and 11.

Theoretical Sections:

Sections 1-6 (learnt)
Sections 7-10 (to be learnt)

Our pupils will have gained knowledge of the following by the end of the course (end of Year 9):

Be very proficient users of technology who are confident and independent in both using and learning new skills on the computer. Students develop this as a skill for life via their preparation and practice to take the IGCSE examinations. Via the IGCSE theory topics they develop a sound foundation knowledge of computer architecture, hardware and software, software development, ICT applications at home and work, and e-Safety.

Design & Technology

Our pupils will have gained knowledge of the following by the end of Year 7:

Chocolate Moulds: Vacuum forming. Competition with link to Food Technology.

Ear-Phone Cable Tidy: Iterative design challenge. Laser cut acrylic and use of CAD (2D Design)
Pen Holder: Use of acrylic and the laser cutter together with hand tools. Use of jigs to ensure accuracy, quality and speed of production.
SMART Thermometer: SMART materials and aluminium sheet. Bending jigs for accuracy Timber and Manufactured Board Project: Design and make a method of storing keys.
Electronics: Soldering simple PCBs. An introduction to components and soldering.
Graphics: Oblique drawing and orthographic projection

Our pupils will have gained knowledge of the following by the end of Year 8:

Textiles: Introduction to compliant materials STEM Challenges: Iterative design challenges tackled in teams (includes work on structures) Sublimation Printing: Design and making a set of coasters for a family event

Graphics: Isometric drawing and orthographic projection. Simple rendering

Bracelet: An iterative design project developing a bracelet by experimenting with paper, card, aluminium and acrylic.

IKEA Project: Design and make a scale model of a product that extends the range of garden items sold by IKEA.

House Competition: Design a product for a teenager in the style of JJD Furniture Formal Test: December and May

Our pupils will have gained knowledge of the following by the end of Year 9:

Pewter Casting: Designing jewellery influence by shapes in nature

Pizza Cutter: Using Styrofoam to produce a scale 1:1 prototype model of an ergonomic pizza cutter Post-Modern Clock: Design and make a clock based on the Post-Modern design era

PICAXE Control Technology: Solder a circuit and then programme the microchip

Graphics: Perspective drawing and orthographic projection

House Competition: Design a product for the home in the style of Alessi

Mini-NEA: Students will be given a context. They will then work independently within a set time period. They will work through the iterative design process completing the NEA.

	House Competition: Design a product for the shop at the National Memorial Arboretum. Formal Tests: December and May Our pupils will have the skills to do the following by the end of Year 7: Marking out on wood, metal and polymer Drawing in oblique Producing an orthographic projection Using machines such as the band facer, scroll saw, pillar drill Using hand tools such as coping saw, tenon saw, file, metal snips Electronic soldering	Our pupils will have the skills to do the following by the end of Year 8: Textiles: Pinning, tacking stitching and machine stitching How to sublimation print Iterative designing How to draw in isometric How to roll copper into a bracelet Thermoforming using an oven The use of prototypes to develop a product The use of 3D models to design a product	Examination: 90 minute examination in the summer term. Our pupils will have the skills to do the following by the end of Year 9: • Advance electrical soldering • Programming a microchip to embed intelligence into a circuit • Vacuum forming • Pewter casting • How to draw in perspective • One point perspective drawing • Two point perspective drawing • The ability to work as an iterative designer in the mini-NEA project • The ability to work independently in the
			 miniNEA project The ability to be innovative and creative: Post modern clock, Alessi house competition and miniNEA
English	The English department instructs students in four areas: Reading Writing Spoken Communication Literacy (or accuracy in spelling, punctuation and grammar) The curriculum visits and revisits the skills related to these areas regularly, each time in a novel form. The intent is for students to develop the independence that will serve them well at GCSE. In Year 7, students will:	 study Shakespearean drama by reading and writing about The Tempest study modern narrative fiction by reading and writing about Boy Everywhere by A.M. Dassu study fiction by writing creatively in prose study non-fiction by writing about their knowledge of media concepts and applications study modern drama by reading and writing about An Inspector Calls by J.B. Priestley 	 study Shakespearean drama by reading and writing about Julius Caesar study fiction by writing in the short story form study nineteenth century fiction by reading and writing about a range of short stories and extracts from before 1914 study narrative and lyric poetry by reading and writing poems in a variety of forms and traditions which range from Homer to Twitter study non-fiction by reading and writing on the theme of the history and diversity of English

- study modern narrative fiction by reading and writing about Ghost by Jason Reynolds
- study nineteenth century narrative fiction by reading and writing about A Christmas Carol by Charles Dickens
- study **non-fiction** by reading and writing about media literacy
- study narrative and lyric poetry by reading and writing poems in a variety of forms and traditions
- study Shakespearean drama by reading and writing about A Midsummer Night's Dream
- study fiction by writing creatively in prose

At the end of each unit there is an assessment which is used to inform future teaching and identify those students who will benefit from a literacy support intervention which sees students taught in a small group with an experienced teacher.

Our expectations for students include:

- regularly presenting on their reading and learning
- reading independently both at home and in fortnightly reading lessons
- producing lengthy written work
- using discussion to learn independently.

 study narrative and lyric poetry by reading and writing poems in a variety of forms and traditions

At the end of each unit there is an assessment which is used to inform future teaching and identify those students who will benefit from a literacy support intervention which sees students taught in a small group with an experienced teacher.

Our expectations for students include:

- regularly presenting on their reading and learning
- reading independently both at home and in fortnightly reading lessons
- producing lengthy written work
- using discussion to learn independently.

 study modern narrative fiction by reading and writing about Liccle Bit by Alex Wheatle

At the end of each unit there is an assessment which is used to inform future teaching and identify those students who will benefit from a literacy support intervention which sees students taught in a small group with an experienced teacher.

Our expectations for students include:

- regularly presenting on their reading and learning
- reading independently both at home and infortnightly reading lessons
- producing lengthy written work
- using discussion to learn independently.

Students in Year 9 also sit an end-of-year exam, which is a summative assessment of their learning at key stage 3.

Amazing Places

	following by the end of Year 7:	following by the end of Year 8:	following by the end of Year 9:
	1. Basic greetings and introducing a person	1. Eating: 3 meals a day/Chinese food/ordering	1. My life: Talk about yourself, family, friends
	2. Family and pets, Christmas, Chinese New	food and drink/eating fruit, vegetables, meats	and routines/Talk about changes in someone's life
	Year and time expression	2. Holiday: interesting places/weather and	2. School Life: Talk about school
	3. Hobbies	climate/transport/nationality	subjects/Describe school location and facilities /Talk
	4. School life		about a typical school day/Talk about exchanges

5. Food and drinks

Grammar: can use connectives 和,也,因为,可是/can use time phrases,e.g. 今天,星期一,早上/can use modal verb 会 to say what activities you can do and cannot do/can use 喜欢,不喜欢,爱,不爱 to express simple opinion.

Our pupils will have the skills to do the following by the end of Year 7:

Listening: Understand short simple sentences or dialogue on familiar topics and pick out the main points when spoken slowly and clearly

Speaking: Can take part in a simple conversation using basic structures and sentence patterns

Reading: Can understand a long sentence (Approx. 20 characters) made up of familiar language / can translate short simple sentences (Approx. 10 characters) into English, can read a paragraph of 40-60 characters on familiar topics

Writing: Can translate and write simple texts (Approx. 30-60 characters) from memory without support

3. About a person: appearance/routine/a person's room/favourite clothes and colour
4. Home area: My town/Directions/My house/Parents' jobs/Weekend Plan
5. Buying things: supermarket shopping/clothing shopping/at a market/buying gifts

Grammar: Can apply conjunctions 也,还,但是,虽然…但是,因为…所以,要是 / can express past tense using verb+了 / can express future tense using 要,想,会/Can apply fixed structures 一边…一边,又…又 / can apply intensifiers such as 非常,十分,有一点儿/Can apply correct measure words/can arrange words in the right order to form sentences/know where to place time and location words

Our pupils will have the skills to do the following by the end of Year 8:

Listening: Understand spoken passages with longer sentences on familiar topics, spoken clearly and more slowly than normal native speaker speed

Speaking: Can give a short-prepared talk (Approx. 2 minutes) using a variety of structures on a range of topics (with some notes), can answer questions in full sentences on familiar topics

Reading: Can understand longer texts of approx. 80-100 characters, which may contain a few unpredictable elements; can translate a text with moderate difficulty (Approx. 50 characters) into English.

- 3. Leisure Activities: Describe sports activities /Talk about extra-curricular activities/Talk about how you socialise with family and friends
- 4. Around the World: Describe the four seasons and climate of different places / Talk about famous monuments around the world and transportation
- 5. Shopping: Talk about shopping experiences at different places / Know how to order things / Express your views on different ways of shopping

Grammar: can express past tense using 过 / can express future tense using 打算 / can use conjunctions 虽然...但是,不但...而且还,除了...以外,还,如果...就 / can compare using ...比... 更.../can use modal verbs 应该 / can apply intensifiers such as 超级,...极了,一点儿都不

Our pupils will have the skills to do the following by the end of Year 9:

Listening: Understand extended speech of moderate length approx. 50 words, which may contain a couple of unpredictable elements, but are delivered clearly and at slower than normal native speaker speed

Speaking: Can speak confidently in role plays, describing photocards and presentation / can express opinions with justification & sustain conversations by asking questions and adding extra details

Reading: Can retrieve information from a passage of 100-150 characters on familiar topics with exceptionally able pupils reading 200-character

		Writing: Can translate and produce a range of longer texts in an appropriate style on familiar topics (50-100 characters) from memory without support, and can apply a good range of vocabulary	passages confidently / develop a vocabulary base of 300 characters. Writing: Can write a long passage of 75 -150 characters on a familiar topic without notes
Maths	The ethos of Mathematics at QMGS in every year of school education is to provide students with a way to understand the world, as well as to develop the knowledge and resilience necessary to pursue mathematics at a higher level. Students will encounter a variety of problems to help them recognise that Maths permeates into all aspects of life, form an appreciation of the beauty of Mathematics, and develop a sense of curiosity and discovery around the subject. Pupils follow the MyMaths for KS3 1C text book, available through Kerboodle and supplemented by drfrostmaths.com. This covers: introductory algebra, shape and space, data handling, number work. The lessons cover all the fundamental skills so that any gaps in a pupil's knowledge, from primary school, are filled. The ability to reason mathematically is extended through access to problem solving activities in lesson. Students discuss how to select appropriate methods and techniques to unfamiliar problems, and begin to move between different numerical, algebraic, and geometric representations. In year 7, all boys receive a musical instrument on	Pupils follow the MyMaths for KS3 2C text book, available through Kerboodle and supplemented by drfrostmaths.com. This covers: further developing algebraic skills to solve multi-step equations and further investigation of formulae, shape and space extending to including similar triangles, constructions, data handling and probability and the continued practise of number work. The lessons develop all the fundamental skills and expand on the pupils learning from Year 7. Students further develop their mathematical reasoning, and become more independent in selecting techniques to non-routine problems and fluent in moving between different numerical, algebraic, and geometric representations.	Pupils follow the MyMaths for KS3 3C text book, available through Kerboodle and supplemented by drfrostmaths.com. This covers: further developing algebraic skills to solve tough problems involving complex algebraic fractions, in shape and space developing an understanding of trigonometry and begin to explore the circle theorems, in probability work with independent and mutually exclusive events, and understand linear and quadratic graphs, equations and sequences. These lessons further develop fluency in fundamental skills, mathematical reasoning, and the ability to solve increasingly more sophisticated (multi-step) problems, ready for GCSE.
iviusic	free loan for 12 months. Boys have the option of choosing either trumpet, trombone, baritone or	3 main projects: Blues/ Scales/Musicals.	main projects: Reggae/Film Music/ and a final project where pupils choose the main area of focus.

clarinet. Everybody learns together in their form groups.

The KS3 scheme of work aims at developing performing, composing and listening/appraising skills.

Performing:

By the end of year 7, all pupils will have played solo and ensemble pieces on their chosen wind instrument. They will also have started learning basic keyboard skills. The opportunity is given for parents to pay for extra instrumental lessons which will enable some to sit instrumental exams. All boys are encouraged to join an extra curricular music group. Eg. Training Band/Choir.

Composing:

Various composing activities are completed including writing a fanfare & developing improvisatory skills on their wind instruments. Musical notation is taught so that all pupils have an understanding of how rhythm and pitch are written on a treble clef stave.

Listening/appraising:

Pupils are encouraged to develop their appraising skills through a series of listening activities completed during the year.

Homework consists mainly of instrumental practice, however some theory tasks are also set.

Each topic further develops performing, composing and listening/appraising skills. The lessons continue to be highly practical with more emphasis now however on developing keyboard skills.

Performing:

Each project contains various differentiated performing challenges.

Those who opted to continue with their wind instrument learn with a peripatetic instrumental teacher and also play with the Training Band. They are encouraged to bring their instruments to school and to use them in the projects where appropriate.

All boys are encouraged to join an extra curricular music group. Eg. Training Band/Choir/orchestra

Composing involves:

Writing blues lyrics; composing a short scalic tune; improvising on blues & pentatonic scales; using Sibelius software.

Listening & appraising:

These skills are further developed by listening to music and answering questions linked to each project. Theory exercises are also set.

Performing:

Keyboard technique is developed using more demanding repertoire which involves more independence between the 2 hands and more complex chord patterns. Bass clef notation is taught.

All boys are encouraged to join an extra curricular music group.

Eg. Training Band/Choir/orchestra/jazz band

Composing tasks involve:

Composing a reggae piece (including chord sequence, melody & bass line on Sibelius); composing a Djembe piece; composing a 'junk' percussion piece; writing a theme & variations.

Listening & appraising:

These skills are developed further by listening to music and answering questions linked to each project. Theory HW tasks are also set.

Physics	See below for Year 7 Science	Our pupils will have gained knowledge and skills in the following areas by the end of Year 8: • Sound including wave idea and speed measurement techniques. Simple speed calculations are extended with echoes for example. It's the easiest post Year 7 KS3 Physics unit so is a good starter for students to feel	Our pupils will have gained knowledge and skills in the following areas by the end of Year 9: • Motion including graphical and mathematical methods of analysis. This builds on the year 8 Forces work in terms of algebraic manipulation for example. It's essential to help prepare students for GCSE but generally avoids vector treatments which students are generally not ready to deal with yet. Of course, we have extension

WEST SEST
4

		acomplemental a book it at mot about the annulation of a survey of the	motorials available for students who shows as all
		comfortable but it stretches them later on with echo calculations for example.	materials available for students who show unusually advanced capabilities.
		 Light including ray diagrams and analysis. Simple KS2 observations are extended as we try to allow pupils to model refraction for example (which can stretch to university level research for the most able) Forces including Hooke's Law and numerous mathematical methods. This unit builds into a highly mathematical challenge so builds on the echoes calculations from Sound. Space including pupil presentations on the Solar System and beyond. This is open ended and some pupils research very advanced concepts such as neutron star formation. 	 Electricity including many practical based activities using various electrical meters. This builds on KS2 and Yr 7 including parallel circuit analysis, multimeter use and modelling. Also equation use is frequent which re-enforces maths skills from the previous unit. Magnetism including an electromagnet based practical assessment. This follows on naturally from the electricity unit and involves more complex electromagnetic circuit diagrams. And also more extended writing as there has been a lack of this in earlier units in favour of developing mathematical and diagrammatic skills. Energy including pupil presentations on electrical generation methods. Pupils should learn from mistakes made with their year 8 Space presentations and develop those soft skills further.
			Some content will overlap with Geography's teaching here. This unit works well here as we start
			GCSE after the KS3 Exam with the Energy unit to keep them motivated through June and July.
